

APPENDIX

Please replace the paragraph beginning on page 74, line 14, with the following rewritten paragraph:

The [light inlet block 137A] light inlet block 137A is used for routing the reference light to the recording medium for hologram 130. The reference light is incident on [ne] one end face of the light inlet block 147A. This light inlet block is supported by first thrusting roll 155A and a second thrusting roll 155B arranged on the object light incident on the reference light incident side. The first thrusting roll 155A and the second thrusting roll 155B are fixed while the third thrusting roll 155V is movable in the fore-and-aft direction as indicated by arrow d in Fig.22. The recording medium for hologram 130 is passed through a space between the first thrusting roll 155A and the light inlet block 130 and into a space between the second thrusting roll 155B and the light inlet block 130. In this space, the third thrusting roll 155C is moved as indicated by the arrow d in Fig.22 and exerts a pressure against the light inlet block 137A against the first thrusting roll 155A and the second thrusting roll 155B. In this manner, the recording medium for hologram 130 and the light inlet block 137A are supported with the recording medium for hologram 130 being pressed against the light inlet block 130.--
